Analysis

The increase in the annualised base pay following the salary increase paid in April has been balanced by the reduction in workforce numbers since June 2017, the average cost per employee however, has remained stable.

Overall, there has been a decrease in both the number and cost of agency workers in the past twelve months with agency workers now forming 11.8% of our total workforce.

Whilst it is necessary to control the number of agency workers, there will always be a requirement to use this workforce to fill short term or stop gap situations where the Council need to address an imbalance in the workforce / workload equation.

Contract numbers are continuing to reduce but we still need to engage these types of workers to deliver key objectives across the organisation especially where a project requires a level of expertise or specialist knowledge that is unavailable within the permanent workforce. It is important that the number of Consultants/Interim Workers continues to be monitored to ensure that individual's are meeting their objectives, that numbers are controlled and that project deadlines are met.

The reduction in workforce numbers and in the number of agency workers is reflected in a 2% reduction in total costs in the last 12 months.

The twelve months to June 18 saw fewer people leaving than in the twelve months to June 2017. In the last year the largest number of people leaving left due to either voluntary resignation or retirement, in the previous year the largest number of leavers was due to redundancy.

Children's Services had the highest proportion of leavers at 32%, Adult Services had 17% of leavers and Housing & Growth had 7%.

Whilst our headcount has been reducing steadily we are still attracting a sufficient amount of new employees to fill key vacancies within the organisation.

The highest proportion of starters during the last year were in Children's Services (38%) followed by Shared Service Centre (13%), Customer Services/Libraries (12.3%) and Adult Services (8%). All of the starters in these areas took up permanent contracts.

Analysis

## Council Sickness Target: 6 days

The average days recorded in June 2018 compared to June last year have reduced slightly, although when compared to the data for the last quarter, the average days lost has increased although the cost has reduced. The increase may be due to better recording of absence by line managers.

Recorded My Conversation outcomes is behind expectations for 2018 (40%) when compared to 2017 (62%) but increased awareness sessions have improved matters in the short term.

HR Business Partners continue to work with their service areas to minimise data gaps and address performance concerns across the organisation.
