Academic health science partnership

David Fish, Managing Director

Hilary Ross, Director of Strategic Development

To translate cutting-edge research and innovation into measurable health and wealth gain for patients and populations – delivering solutions to address the most pressing healthcare challenges in London, across the UK and globally

Reframing the pathway – an integrated journey to transform healthcare through innovation into practice

Bringing together formal designations under one umbrella and working with partners to:

- **Discover** new treatments and methods for improving health
- **Develop** discoveries through clinical trials
- **Implement** changes at scale and pace across the partnership
- **Evaluate** how the system is working and what can be done next
- **Educate** the workforce and develop capabilities
- **Use information** to its best effect throughout the system

Partnership vision and values

Our work is:

Patient led

Population focused

Developed in partnership

Delivered at pace

the geography and partners

Six million
population

23 healthcare organisations acute and mental health trusts; community providers

11 higher education institutes and research networks

20 Clinical Commissioning Groups (CCGs)

Industry partnerships in research and translation of innovation into health and wealth

26 boroughs and local councils

Examples of progress in 2014/15: Improving specialist cancer and cardiac services

The challenge:

Cancer and cardiac disease account for 60% of premature deaths before the age of 75 in London
Clinicians recognised the need to implement new models of care to address this inequality
By changing services, the partnership has the opportunity to save 1,200 lives per year

Addressing the challenge:

- UCLPartners supported clinical teams and commissioners in developing proposals for specialised services and engaging with the public
- Now we are supporting implementation of such centres and *links to primary care and secondary care*
- The new Barts Heart Centre has become a clinical and academic hub for specialist cardiac care
- UCLH is developing as the major hub for specialist cancer care, with RFL centre for renal cancer surgery

The outcomes:

Care will be delivered within an integrated system that delivers care in the setting most suited to patients' needs and supports quality improvement across whole pathways
Improvements in quality of care and patient outcomes, supported by opportunities for excellence in research and education
Net benefit to the system of £94.2m
Save 1,200 lives per year when fully implemented

Examples of progress in 2014/15: Supporting primary care in the prevention of heart attacks and strokes

The challenge:

Atrial fibrillation causes 1 in 8 strokes
Around 26,000 people in our region have AF and do not know it
More than half of strokes due to AF could be prevented by appropriate use of oral anti-coagulation treatment
NICE highlights the need for ensure people with AF receive the right treatment
Camden had particularly low figures

Addressing the challenge:

- UCLPartners worked with Camden CCG to help GP practices identify people with AF
- Clinical decision support tool helped GPs to prescribe appropriate treatment
- Established community of practice with 12 CCGs to improve detection and management of AF across the region

The outcomes:

Camden has seen very positive uptake in 35 out of 37 GP practices
The project is being replicated by Enfield, Barnet, Haringey and Islington
If Camden's results are repeated across the region, we will reach NICE guidelines in 18 months
Preventing 700 strokes saves 210 lives and approx. £7m each year

Our strategic priorities – supporting delivery of the 5YFV

System Transformation: Improve health outcomes for patients and the population through supporting the system to implement and evaluate integrated pathways and new models of care

Quality: Support organisations and individuals to develop capability and infrastructure improve quality, patient safety and experience and reduce costs

Innovation: Ensure innovation is embedded to drive change at scale and pace

Sustainability: Ensure UCLPartners is a sustainable, viable organisation

Priorities for 2015/16: Transformation of specialist cancer and cardiovascular care

Securing the benefits from the new academic medical centres as hubs for research and innovation within wider integrated systems of care

Supporting the development and delivery of a new model of care for cancer services including:

- Improving one-year survival, by diagnosing cancer sooner and improving access to tests
- Improving patient experience by integrating cancer treatment into the wider health system

Supporting the transformation of cardiovascular care including:

- Scaling up approach on AF and cardiovascular prevention
- Integration of Barts Heart Centre with a new QMUL/UCL joint cardiovascular institute to drive forward diagnostic and therapeutic innovation and prevention strategies

Priorities for 2015/16: Delivering a new model of care for children and adolescent mental health services

Integration of mental health and physical health provision is a priority in the 5YFV

Government task force has identified the need to improve quality, access and safety in mental health services for children and young people

1 in 10 young people have a diagnosable mental health problem yet there is currently very limited access to mental health services, with long waiting times and often poor outcomes

We are working as part of a partnership with Anna Freud Centre (charity), the Tavistock and Portman NHS Foundation Trust and the Dartmouth Center for Healthcare Delivery Science in the US on a new model of care for CAMHS in NCL, with support from NHS England (London) and as part of the *National Innovation Accelerator Programme*

The *THRIVE* model of care will provide more readily accessible support that is responsive to the needs and preferences of young people and their families through tools such as shared decision-making

Priorities for 2015/16: Supporting primary care transformation

Building capacity and capability in primary care within new provider organisations is vital for the delivery of new models of care and for viable health economies

Building on our primary care development and quality improvement work in East London, we are working with federation leads across NCL to scope support for a similar approach as part of the evolving strategy for the NCL health economy

We would like this to include support for the development of federations, evaluation, and development and embedding of quality improvement approaches such as QI collaboratives, development of quality indicators and dashboards linked to GP education and guidelines
